Fob Control Unit – Lecture Lab

Please start by checking out the Fob project in the lectures repository.

Before you start this lecture/lab, please carefully examine the `FobControlUnitTest.runBefore()` method and make sure that you understand how it's setting up the `FobControlUnit`.

Here are some other things that you might need to know:

- `FobControlUnit` uses a `Map` to store `Fob->User`

- There are two tests: Focus on the "`testFobAccess`" because it fails.

Here is what you need to do:

- Fix the code to make the test pass.

    o Start by figuring out where the code fails

    o Why is it failing? Write down two hypotheses

    o How can you investigate each hypothesis?
